

ADITYA NARENDRA BHAVSAR

GenAI & Agentic AI Engineer | LangGraph · LangChain · RAG · FastAPI · Python

Mumbai, Maharashtra | +91-8767672885 | adityabhavsar31.ab@gmail.com | linkedin.com/in/aditya-bhavsar31 | github.com/Aditya083103

SUMMARY

GenAI engineer building and shipping production multi-agent and RAG systems with LangGraph, LangChain, and FastAPI, backed by a Scopus-indexed deep-learning publication.

SKILLS

GenAI / Agentic AI	LangChain, LangGraph, LangSmith, RAG, Multi-Agent Systems, Agent Orchestration, Tool Calling, Prompt Engineering, Embeddings, Semantic Caching, LLM Evaluation
LLMs	Azure OpenAI, Anthropic Claude, Google Gemini
Languages & Backend	Python, FastAPI, Pydantic, WebSockets, REST APIs, JWT/OAuth, Java, SQL
Data & Frontend	ChromaDB (Vector DB), PostgreSQL, Redis, React, Tailwind
Tools & Cloud	Docker, Kubernetes, Terraform, Git/GitHub, AWS, Azure, Prometheus/Grafana, CI/CD

EXPERIENCE

Mphasis

Mumbai, India

Associate Software Engineer

Sep 2025 – Present

- **AI-Powered Baggage Claim (Airline Client):** Built core components of a 5-agent, cloud-agnostic LangGraph pipeline automating baggage damage claims, CV damage detection, OCR extraction and fraud detection with human-in-the-loop review cutting handling time 60% across 3 LLM providers, 2 clouds.
- **Voice Chatbot Framework:** Built a LangGraph-orchestrated RAG chatbot (ChromaDB retrieval, Redis semantic caching, JWT multi-tenant auth) served through FastAPI as a voice-enabled AI framework, live in production handling 500+ calls/day across 15+ conversational intents with Prometheus/Grafana and LangSmith observability.
- Recognized with an **Accolade Award Nomination** and a Commendable performance review for contributions and leading the Baggage Claim and Voice Chatbot deliverables.

PROJECTS

AIRP — Autonomous Investment Research Platform

[GitHub](#)

LangGraph, FastAPI, ChromaDB, React, PostgreSQL, Redis, Docker

May 2026 – Jul 2026

- Built a multi-agent research system with 8 specialized LangGraph agents running in parallel, coordinating via adversarial agent debate to produce grounded investment memos in under 90 seconds.
- Developed a FastAPI backend with WebSocket streaming for real-time agent output and a ChromaDB RAG pipeline for source-grounded analysis across 50+ retrieved sources per query.
- Integrated LangSmith for end-to-end observability across the agent graph, with PostgreSQL and Redis for persistence and caching. Containerized the full stack with Docker Compose for one-command deployment.
- Built an interactive React 18 frontend for live research streaming and memo delivery.

PUBLICATIONS

Deep Learning and Image Analytics for Forest Land Management: Classification and Object Detection

Journal of Computer Science, Vol. 22, 2026 | Co-author, Scopus-indexed | YOLOv8, CNN, Google Earth Engine, Roboflow

- Trained a YOLOv8 detector for tree enumeration from high-resolution satellite imagery and a custom CNN classifying 10 species at 93% precision. Processed and annotated datasets via Roboflow and extracted satellite imagery through Google Earth Engine for model training and land analysis.

EDUCATION

B.Tech in Computer Engineering, KJ Somaiya Institute of Technology

Mumbai, India

2021 - 2025

CGPA: 9.05
